Energy Conservation Policy

Preamble:

To promote environmental consciousness and holistic development of students, the institution has adopted Energy Conservation Policy for an “**Environment of educational excellence**”. The institution aims to realistically and comprehensively reduce energy consumption, assure acceptable indoor air quality and improve energy efficiency on campus through methods that are consistent with a safe, secure, and Eco-conscious campus community. As outlined in this policy, energy conservation will be accomplished by developing a proactive and progressive approach to providing energy efficient, responsible, and cost- effective operations on campus.

Applies to:

- Faculty.
- Staff.
- Students.
- Visitors.

Energy Conservation Practices:

- Annual Energy audit is made mandatory.
- Our Energy conservation practices include the College replacing all tube lights with LED tubes, LED bulbs being the most energy efficient lighting option. LED tubes use 75% less electricity than incandescent tubes (Energy Star). LED tubes last about 25 times longer than traditional incandescent tubes. 100% of lighting requirement is met through LEDs.
- Energy conservation practices and eco-friendly habits are inculcated among students and staff through cautioning them about simple things which are really effective to reduce Electricity Consumption like students and staff turning off all lights, appliances and electronics not in use.

Raising Awareness on Energy Conservation:

- Sustainability efforts, energy savings, and greenhouse gas inventory metrics are all high priorities to a college and more importantly to our students. When engaging in a master energy plan or energy savings renovation project, there is an excellent opportunity to build student support around campus sustainability. Energy improvements occur mostly out of sight so raising awareness of these projects can hold real benefits, including encouraging desired behavior on how a campus building can and should be used to contribute to a college’s carbon footprint reduction goals. Rising utility rates are generally a fact of life. Just like inflation, the cost of electricity, gas, and water will go up a few percentage points each year. Whether all at once or over time, utility rate increases can wreak havoc on the operations budgets for the college.

Save Energy TIPS to be followed:

1. Activate power management features on computer and monitor so that it will go into a low power “sleep” mode when the students and staff are not working on it.
2. Turn off the monitor when the students and staff leave the table.
3. Activate power management features on laser printer.
4. Whenever possible, shut down rather than logging off.
5. Turn off unnecessary lights and use daylight instead.
6. Avoid the use of decorative lighting.
7. Use LED or compact fluorescent bulbs.
8. Keep lights off in conference halls, classrooms, seminar halls when they are not in use.
9. Use the fans only when they are needed.
10. Unplug appliances not plugged into power strips (Like TVs, Refrigerators, ACs, tea/coffeepots, printers and chargers).
11. Avoid use of decorative and high voltage lights.
12. Take the maximum advantage of sunlight.
